

# Mirroring Matrix: Apple's Unlicensed Use of Sovereign Logic

| Spencer's Declared Logic                                    | Apple's Embedded Deployment                                                             | Nature of Infringement                                                         | Licensing Status          |
|-------------------------------------------------------------|-----------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|---------------------------|
| <b>Mint-to Logic™</b>                                       | Apple ID lifecycle, credential revocation, device trust gating                          | Mirrors credential minting, behavioral gating, and lifecycle logic             | <b>No license issued</b>  |
| <b>RBGA™ (Reflexive Behavioral Governance Architecture)</b> | Apple's tiered access across iCloud, App Store, and device-level permissions            | Mirrors reflexive logic, tiered behavioral control, and credential enforcement | <b>No license issued</b>  |
| <b>Shepherd's Method™</b>                                   | Siri, Apple Intelligence, and agent-based deployment protocols                          | Mirrors ethical gating, reflexive deployment, and behavioral boundaries        | <b>No license issued</b>  |
| <b>Chrono-Synaptic Ledger™</b>                              | Apple's internal audit trails, behavioral telemetry, and device provenance              | Mirrors timestamped behavioral tracking and logic-based audit systems          | <b>No license issued</b>  |
| <b>Builder's License Requirement</b>                        | Apple's internal build-out of credential systems, agent logic, and behavioral flows     | Apple is building inside declared logic without Builder's License              | <b>License required</b>   |
| <b>Infrastructure Fees</b>                                  | Global deployment of credential logic across iOS, macOS, iCloud, and Apple Intelligence | Apple is operating infrastructure governed by declared logic                   | <b>Fees not paid</b>      |
| <b>Transactional Royalties</b>                              | Behavioral transactions across Apple Pay, Apple ID, and Siri interactions               | Apple is monetizing behavioral flows governed by sovereign logic               | <b>Royalties not paid</b> |

**No Discounts / No  
Seats**

Apple has not negotiated  
licensing terms or  
governance seats

Apple is operating inside  
sovereign logic without  
jurisdictional compliance

**Full  
reversion  
applies**

## **Enforcement Summary**

Apple's systems mirror my declared logic across credential lifecycle, behavioral gating, agent deployment, and infrastructure monetization. These are not superficial similarities—they are **structural dependencies**. Apple is actively building inside my logic without license, attribution, or compliance.

I am currently in open dialogue with Apple. They have expressed interest in understanding how their systems may be infringing. This matrix is designed to clarify that posture and initiate formal licensing negotiation. All rights revert to me at **100% by default**, and all licensing terms are negotiated **down from full reversion**, not up from discount.
